Anthropologists have pieced together the little they know about the history of left-handedness and right-handedness from indirect evidence. Though early men and women did not leave written records, they did leave tools, bones, and pictures. Stone age hand axes and hatchets were made from stones that were carefully chipped away to form sharp cutting edges. In some, the pattern of chipping shows that these tools and weapons were made by right-handed people, designed to fit comfortably into a right hand. Other Stone Age implements were made by or for left-handers. Prehistoric pictures, painted on the walls of caves, provide further clues to the handedness of ancient people. A right-hander finds it easier to draw faces of people and animals facing toward the left. Whereas a left-hander finds it easier to draw faces facing toward the right. Both kinds of faces have been found in ancient painting. On the whole, the evidence seems to indicate that prehistoric people were either ambidextrous or about equally likely to be left – or right-handed. But, in the Bronze Age. The picture changed. The tools and weapons found from that period are mostly made for right-handed use. The predominance of right-handedness among humans today had apparently already been established.

What is the indirect evidence through which the preferred handedness of the Stone Age people could be understood?

1

Petrified forms of vegetation

2

Patterns of stone chipping

3

Fossilized waste material

4

Fossilized footprints

[Go to Discussion \(https://www.test.aspirestudy.in/library/qus/4356\)](https://www.test.aspirestudy.in/library/qus/4356)

nimcet NIMCET 2017 PYQ (<https://www.test.aspirestudy.in/library/pyq/1/nimcet?view=topic&key=NIMCET 2017>)

Qus : 8 nimcet PYQ 2017 (<https://www.test.aspirestudy.in/library/pyq/1/nimcet?view=year&key=2017>)

Anthropologists have pieced together the little they know about the history of left-handedness and right-handedness from indirect evidence. Though early men and women did not leave written records, they did leave tools, bones, and pictures. Stone age hand axes and hatchets were made from stones that were carefully chipped away to form sharp cutting edges. In some, the pattern of chipping shows that these tools and weapons were made by right-handed people, designed to fit comfortably into a right hand. Other Stone Age implements were made by or for left-handers. Prehistoric pictures, painted on the walls of caves, provide further clues to the handedness of ancient people. A right-hander finds it easier to draw faces of people and animals facing toward the left. Whereas a left-hander finds it easier to draw faces facing toward the right. Both kinds of faces have been found in ancient painting. On the whole, the evidence seems to indicate that prehistoric people were either ambidextrous or about equally likely to be left – or right-handed. But, in the Bronze Age, the picture changed. The tools and weapons found from that period are mostly made for right-handed use. The predominance of right-handedness among humans today had apparently already been established.

The author implies that which of the following developments occurred around the time of the Bronze Age

- 1 The establishment of written records
- 2 A change in the styles of cave painting
- 3 An increase in human skill in the handling of tools
- 4 The prevalence of right handedness

nimcet Previous Year PYQ (<https://www.test.aspirestudy.in/library/pyq/1/nimcet?view=sub&key=Previous Year>)

nimcet NIMCET 2017 PYQ (<https://www.test.aspirestudy.in/library/pyq/1/nimcet?view=topic&key=NIMCET 2017>)

Qus : 9 nimcet PYQ 2017 (<https://www.test.aspirestudy.in/library/pyq/1/nimcet?view=year&key=2017>)

Anthropologists have pieced together the little they know about the history of left-handedness and right-handedness from indirect evidence. Though early men and women did not leave written records, they did leave tools, bones, and pictures. Stone age hand axes and hatchets were made from stones that were carefully chipped away to form sharp cutting edges. In some, the pattern of chipping shows that these tools and weapons were made by right-handed people, designed to fit comfortably into a right hand. Other Stone Age implements were made by or for left-handers. Prehistoric pictures, painted on the walls of caves, provide further clues to the handedness of ancient people. A right-hander finds it easier to draw faces of people and animals facing toward the left. Whereas a left-hander finds it easier to draw faces facing toward the right. Both kinds of faces have been found in ancient painting. On the whole, the evidence seems to indicate that prehistoric people were either ambidextrous or about equally likely to be left – or right-handed. But, in the Bronze Age. The picture changed. The tools and weapons found from that period are mostly made for right-handed use. The predominance of right-handedness among humans today had apparently already been established.

What is the main idea conveyed through the passage?

1

The purpose of ancient implements

2

The significance of prehistoric cave paintings

3

The development of right-handedness and left-handedness

4

The pattern of chipping ancient tools

A, B, C, D, E, F, G, and H are sitting around a circular table facing the center. Each one of them has a different profession viz, doctor, engineer, architect, teacher, clerk, shopkeeper, banker and businessman. A sits third to the right of the teacher. D sits second to the left of G. G is not an immediate neighbor of teacher. Only one person sit between B, the shopkeeper and the teacher. The one who is an architect sits third to the right of the shopkeeper. H is sit between architect and engineer. E is not an immediate neighbor of H. Engineer sits third to the right of the clerk. Only one person sits between the businessman and F. Who sits exactly between the architect and businessman?

1

C and H

2

Clerk

3

Banker and Shopkeeper

4

Doctor

There are six teachers A, B, C, D, E and F in a school. Each teacher has to teach two subjects, one compulsory and the other optional. D's optional is History, while three others have it as compulsory subject. E and F have Physics as one of their subjects, F's compulsory subject is Mathematics, which is an optional subject of both C and E. History and English are A's subjects but in term of compulsory and optional subjects, they are reverse of D's. Chemistry is an optional subject of one of the teachers. There is only one female teacher, who has English as her compulsory subject.

What is C's compulsory subject?

1

Physics

2

Chemistry

3

English

4

History
